Experience

Research and Development Engineer

ITG Centro Tecnológico

Apr 2024 – present

A Coruña, Spain

- Developed a *Retrieval-Augmented Generation (RAG)* chat assistant for a regional distributor to help their sales team access data and images from multiple sources.
- Built an internal tool to evaluate responses generated by language models using classical information extraction metrics and LLM-as-a-judge.
- Designed the current modular *Natural Language Processing (NLP)* application framework based on modular components, that provided scalability and flexibility that enabled rapid expansion into new projects.

Education

Universidade de A Coruña

Bachelor's Degree in Computer Engineering

Oct 2020 – Sep 2024

- Participation in the Bilingual Degree Program in English.
- Completed one academic year at Università degli Studi di Milano (Italy).
- Graduated with Honors in the Final Degree Project.

Universidad Complutense de Madrid

Master's Degree in Video Game Development specialized in Programming

Oct 2025 – present

Projects

Made In The Abyss drive.google.com/drive/folders/

- Developed a functional prototype of a 2D multiplayer roguelike game with a side-scrolling perspective, procedurally generated maps, and enemies with diverse behaviors. Also designed a plan for its funding and commercialization, and created all game assets.
- **Tools Used:** Unity, C#, Photoshop, CapCut, Replica.

Sunward Break 2D drive.google.com/drive/folders/

- Developed a single-player 2D top-down obstacle and stealth game, implementing vision cone mechanics and behavior patterns for different NPCs.
- **Tools Used:** Python, PyGame, Tiled.

Sunward Break 3D – Heat Gale drive.google.com/drive/folders/

- Developed a single-player 3D platform shooter game with movement mechanics focused on movement.
- **Tools Used:** Unity, C#, Blender.

Technical Skills

Programming Languages:

- **Advanced:** Python
- **Intermediate:** C#, Java, C++
- **Basic:** C, OCaml, JavaScript, SQL, HTML, CSS

Tools and Technologies:

- **Game Engines:** Unity, Pygame, Unreal
- **Version Control:** Git, GitLab, GitHub
- **Graphics and Design:** Blender, Photoshop, GIMP
- **Rendering Engines:** OpenGL
- **Integration and Deployment:** Docker

Languages:

- **Spanish:** Native
- **English:** C1 (Advanced)

Areas of Interest

Natural Language Processing (NLP): Focused on the research and development of language models and their applications across different fields.

- Strong knowledge of key concepts such as *Large Language Models (LLMs)* and *Embedding Models*, with practical experience in their implementation and application.
- Involvement in developing intent analysis systems as part of the decision-making flow in conversational agents.

Machine Learning: Interested in the potential of neural network training as a predictive tool.

- Practical experience in developing applications using deep learning models for image classification and user response prediction.
