Experience

Research and Development Engineer

ITG Centro Tecnológico

Apr 2024 – present

A Coruña, Spain

- Designed and built a modular application framework adopted across the NLP team, enabling new projects to be bootstrapped from shared components — work focused on software architecture, design patterns, and maintainability.
- Shipped a production retrieval-augmented chat assistant for a regional distributor, including data ingestion pipelines, evaluation tooling, and deployment via Docker.
- Built an internal evaluation tool combining classical information-extraction metrics with LLM-as-judge scoring to benchmark model outputs.

Education

Universidad Complutense de Madrid

Master's Degree in Video Game Programming

Sep 2025 – Jul 2026

- Coursework covers C++ engine programming, real-time graphics, gameplay systems, and AI for games.

Universidade da Coruña

Bachelor's Degree in Computer Science

Oct 2020 – Sep 2024

- Final degree project graded with honors.
- Erasmus exchange year at Università degli Studi di Milano, Italy.
- Completed under a bilingual curriculum program (English).

Projects

Rotted Bloom — 2.5D Metroidvania

linktr.ee/twinhowlgames 🔗

- Built a 2.5D Metroidvania as a team project, with all gameplay mechanics developed in C++ on Unreal Engine.
- Owned the camera manager, level streaming with runtime loading and unloading of areas, and the persistence system for player and world state.
- **Stack:** Unreal Engine, C++.

Kromask — Co-op Puzzle Game

github.com/Meleagrista/GlobalGameJam2026 🔗 | jorge-juma.itch.io/maskoop 🔗

- Originated at a game jam (released on itch.io as *MaskOop*) and later funded by the university for continued development as *Kromask*.
- Co-op puzzle game built around mask-swapping mechanics, where each mask grants the player a different ability.
- Built the in-engine map editor used by the team to author levels, the event manager coordinating gameplay events, and the signal system wiring interactable map elements to their triggers.
- Took on an organizational role within the programming team during the early phase, coordinating tasks in the absence of a dedicated production team.
- **Stack:** Unity, C#.

Troupe Troupe — Minigame Collection

github.com/Meleagrista/ConJamOn2026 🔗 | jorge-juma.itch.io/circus-on-the-rock 🔗

- Game jam project exploring uncommon input methods. A collection of minigames split between Switch Joy-Con motion controls and real-time voice input.
- Built a Joy-Con-driven minigame by integrating a reverse-engineered library to translate raw controller input into Unity, and contributed to the voice-based minigames.
- **Stack:** Unity, C#.

Made In The Abyss — 2D Multiplayer Roguelike

github.com/Meleagrista/unimi-game-development [↗](#) | drive.google.com/drive/folders [↗](#)

- Built a side-scrolling roguelike with networked multiplayer, procedural map generation, and varied enemy AI behaviors, as part of a fully international team during an Erasmus year at *Università degli Studi di Milano*.
- Personally implemented the animation system and enemy behavior.
- Produced all in-game art assets and authored a commercialization and funding plan as part of the academic deliverable.
- **Stack:** Unity, C#, Photoshop.

Technical Skills

Programming Languages:

- **Proficient:** C++, C#, Python
- **Familiar:** Java, C, JavaScript, SQL, OCaml, React, HTML, CSS, Lua

Game Development:

- **Engines:** Unreal Engine, Unity, Pygame
- **Graphics:** OpenGL
- **Tools:** Blender, Photoshop, GIMP

Software Engineering:

- **Version Control:** Git, GitHub, GitLab, Perforce
- **DevOps:** Docker, Jenkins, CI/CD pipelines

Languages:

- **Spanish:** Native
- **English:** C1 (Bilingual degree)
- **Galician:** C1

Areas of Interest

Tools Development: Drawn to building tools that make complex or repetitive tasks easier for users, rather than pure end-to-end automation.

Engine Architecture: Curious about how game engines work under the hood, specially smaller engines, where the architecture is approachable enough to understand end to end.

Data Processing: Interested in extracting structure by data scraping, language models, network building, and pattern analysis.
